

Boiler Pre-Winter Checklist

Visual checks you can do at home before the heating season. Never work on gas pipes or open up the boiler yourself.

◆ Boiler area

- ☐ Clear boxes, cleaners, aerosol cans and laundry away from the boiler
- ☐ Make sure vents and windows are not blocked
- ☐ Test the carbon monoxide alarm (install one if you have none)

◆ Flue

- ☐ No loose or separated joints
- ☐ No temporary tape patches
- ☐ No rust or holes → if in doubt, do not use it and call for service

◆ Test run (30 minutes)

- ☐ System pressure is within the recommended range
- ☐ No unusual noises
- ☐ No drips under the boiler or at pipe joints
- ☐ No error codes on the display
- ☐ Every room warms up (if not, check the radiator or zone valves)

◆ Call a professional right away if

You smell gas → shut off the gas, open windows, do not touch switches, leave and call your gas supplier or emergency services

The flue is disconnected or corroded

Water keeps leaking

The boiler is more than 10 years old

Write the check date and your service contact in the space below.
